ENGINEERED RELIABILITY • QUALITY • PERFORMANCE

## About Sherwood Electromotion Inc.

Sherwood Electromotion Inc. (SEI) are Wind Power Generators experts. Supported by over 30 years of expertise in the overhaul and assembly of power generation equipment for major industries, SEI is able to offer important services to manufacturers, and to owners/operators, for wind power generators that are rated 1 MW to 6 MW.

Incorporated in 1977, SEI operates two modern industrial facilities, located in Woodbridge (Toronto), Ontario and Buffalo, New York. Utilizing progressive engineering methods and efficient manufacturing processes, these facilities provide a wide range of assembly, overhaul, and supply services to each of the industries SEI serves: Rail, Mass Transit, Industrial, and Wind Power.

Since its inception, SEI has upheld an exemplary tradition of professionalism, integrity, and unwavering commitment to customer satisfaction. SEI's distinctive competitive advantage is in its attentiveness to detail, responsiveness to customers' needs, and ability to provide reliable service solutions.

### Services for Wind Power Generators, rated 1 MW to 6 MW

SEI's extensive expertise and capabilities in the overhaul, repair, and assembly of power generation equipment, supported by over 30 years of experience, gives us the ability to make any required overhaul or repair to wind power generators. This capability gives SEI significant advantages for providing the following services to wind power generators manufacturers and owners/operators:

- Overhaul and repair services
- Contract manufacturing services and partnerships
- Supply of sub-assemblies and components
- Customized service solutions and service programs

### Services for Wind Power Generator Manufacturers

SEI provides valuable services that are specifically designed for manufacturers of wind power generators that are rated 1 MW to 6 MW. SEI's extensive expertise and capabilities makes it possible for SEI to enter into special arrangements and partnerships with wind power generator manufacturers for the delivery of services that include warranty-period repair and overhaul services and contract manufacturing services.

#### Contract Manufacturing

SEI's extensive expertise and strategic position in the North American market places SEI in an ideal position to provide contract manufacturing services to wind power generator manufacturers and to form valuable partnerships with those manufacturers for the delivery of wind power generator products to the Wind Industry. SEI's capacity to meet delivery schedules includes our ability to fulfill even the most demanding manufacturing requirements. SEI's contract manufacturing services provide customers with flexible outsourcing options that are designed to maximize a strategic competitive advantage.

SEI's facility locations benefits manufacturers with reduced transportation costs for wind power generators and components due to the proximity between SEI facilities and North American wind farm installation sites. For overseas manufacturers, contract manufacturing with SEI allows access to the North American market. Furthermore, contract manufacturing with SEI will ensure the local content criteria for North American contracts have been fulfilled.

### Warranty Period Repair Services

SEI is able to enter into special arrangements with manufacturers of wind power generators to provide warranty-period repair services for wind power generators that are rated 1 MW to 6 MW.

SEI's extensive expertise makes it possible for us to make any required repairs to keep wind power generators operating with a complete assurance of reliability. And, our services can be customized to provide any wind power generator repairs.

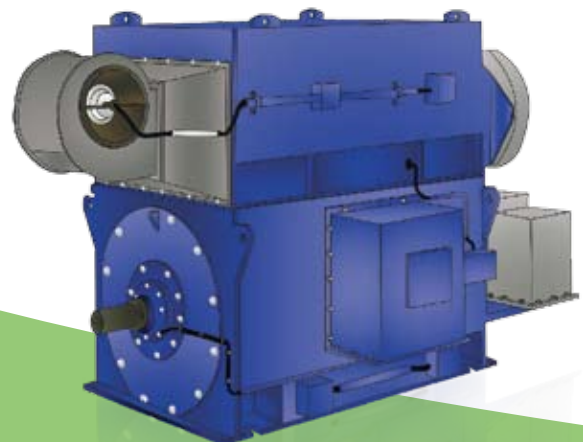

SEI maintains an excellent supply chain to ensure all repairs are completed on time and within budget.

### Services for Owners / Operators of Wind Power Generators

SEI provides owners/operators of wind power generators with services for the overhaul and repair of wind power generators. The scope of these important services will help ensure the reliability and optimum operation of wind power generators after the warranty period has expired. SEI is capable of making any required overhaul or repair to wind power generators.

SEI is also able to make assessments for the creation of specially designed service programs to ensure the operational reliability of wind power generators, regardless of the scope of services required.

SEI also supplies sub-assemblies and components for wind power generators.

## Customized Service Solutions

SEI's services can be customized to meet both manufacturer and owner/operator requirements for wind power generators, and include structured overhaul programs, rewind programs, bearing replacement programs, and unit exchange services. Our services cover all service requirements for wind power generators.

To assist with service requirements, SEI is able to negotiate special arrangements for the delivery of customizable service solutions for our customers.

## Onsite Assessments of Wind Power Generators

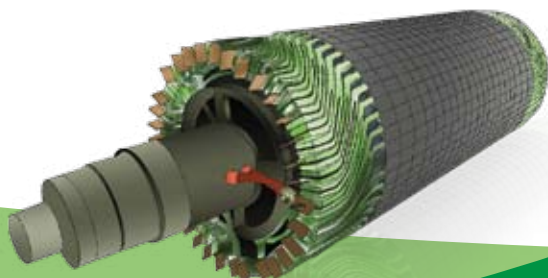

In special situations, SEI will make on-site visits for diagnostics of problems with wind power generators. This important service can help address the requirements for wind power generator overhauls and repairs by providing the first in a series of diagnostic procedures for the required services. The onsite assessment is a special service and one in a series of steps for the full evaluation process of wind power generators.

## Removal and Reinstallation of Wind Power Generators

SEI maintains industry partnerships for the removal and reinstallation of wind power generators and related components inside wind turbine nacelles. To assist customers who require the removal and reinstallation of wind power generators for servicing, SEI can help arrange these services on behalf of our customers as part of the complete set of procedures required for overhaul and repair services at SEI facilities.

## Sherwood Electromotion Key Service Advantages:

- **Expertise:** Our 30-plus year history providing overhauls and service solutions for power generation equipment for major industries gives us the expertise to make any required overhauls and repairs to keep wind power generators operating.
- **Adherence to OEM Specs:** All work performed by SEI meets OEM specifications.
- **Turnaround Time:** We have the capabilities to perform overhauls and repairs in competitively fast turnaround times.
- **Inventory:** Our full inventory of parts and components facilitates quick and efficient overhaul and repair processes.
- **Warranty:** We stand behind every product and service that we provide with a comprehensive warranty policy.
- **Customer Satisfaction:** We are committed to our customers and dedicated to meeting their requirements and expectations.

## Quality

All work performed by SEI involves uncompromising standards and practices that are supported by a rigorous Quality Management System (QMS) for assurance of wind power generators' performance and reliability. Our ongoing commitment to maintaining the superior quality of all SEI products and services, and to ensuring total customer satisfaction, is supported by Continuous Quality Improvement initiatives, Management Quality Review meetings, and dedicated Training and Development programs.

SEI's commitment to the quality and reliability of its products and services has been affirmed by internationally recognized Quality Assurance certification programs. Since 1994, SEI has been an ISO registered company, implementing and strictly following the requirements of ISO 9001:2008 QMS.

ISO 9001

## Let Sherwood Electromotion Provide Service Solutions

SEI welcomes inquiries from wind power generator manufacturers and owners/operators to discuss the full scope of services that SEI can provide for wind power generators, the application of these services to address requirements, and SEI's capabilities for the delivery of services.

SEI operates two modern industrial facilities, situated in Woodbridge, Ontario and Buffalo, New York. With these state of the art factories, we are able to service the North American Rail, Transit, Industrial, and Wind Power markets from coast to coast; additionally, we provide a complete range of services for our worldwide customers. SEI's plants are staffed with experienced/trained personnel and are equipped with the latest manufacturing and testing equipment that provide customers with high-quality, reliable, cost-effective products and services.
